Protein Information

Synonyms	CYC; CYCS; Cytochrome c.
Calculated MW	Calculated MW: 11 kDa; Observed MW: 15 kDa
Uniprot ID	P99999
Gene ID	54205
Background	This gene encodes a small heme protein that functions as a central component of the electron transport chain in mitochondria. The encoded protein associates with the inner membrane of the mitochondrion where it accepts electrons from cytochrome b and transfers them to the cytochrome oxidase complex. This protein is also involved in initiation of apoptosis. Mutations in this gene are associated with autosomal dominant nonsyndromic thrombocytopenia. Numerous processed pseudogenes of this gene are found throughout the human genome.[provided by RefSeq, Jul 2010]
Cellular Location	Mitochondrion intermembrane space. Note: Loosely associated with the inner membrane.
